Midi Visualizer Equipment List

This is the equipment we used with this setup. Other equipment may work just fine as well with the exception of items listed in red. These items are required in order to make their function work. What you use for midi input should be able to change and still work fine, and dimmers wont matter assuming they are dmx driven.

1	Roland V-Drum system (with at least 5 pads)
1	PC
1	Midi to USB interface (we used a Edirol UM-1ex)
1	Enttec Open DMX USB interface
1	BlackMagic Design Decklink Studio (any decklink series card should work)
2	Leviton D4DMX dimmer packs
8	ETC Source Four Pars
2	DMX Cables
1	Midi Cable
1	SDI video cable

Like I said, other similar equipment should work just fine, however as I haven't tested anything other than this, this is all I can say will work for sure. Also it should be noted that video output does not require a decklink card, it can be output via the standard monitor out on your computer. We used the decklink card because we needed to be outputting SDI video.
